INVENTORY FOR HEALTH ASSESSMENT

- The [Ulster County Inventory for Health](#) is a tool to identify which agencies, organizations, and schools are working on the Robert Wood Johnson “What Works for Health” policies and programs.
- These strategies are a menu of tools, policies, and programs that can be used locally to improve health outcomes, and ultimately have an impact on our County Health Ranking.
- The Inventory for Health helps to identify both strengths and gaps in how, as a County, we are addressing community health.

INVENTORY FOR HEALTH ASSESSMENT

- We are currently updating the Inventory for Health using a new Assessment Tool that has been designed to align directly with the language and descriptions included in the RWJF What Works for Health Policies and Programs.
- Community agencies, organizations, and schools will be asked to self-identify which health factors are relevant to the policies and programs that they work on.

INVENTORY FOR HEALTH ASSESSMENT

- They will then be asked to review the section in the Inventory Assessment for each of the relevant health factors which they identified, to determine which policies and programs in the particular section aligns with policies and programs they engage in.
- For each policy or program selected they are asked to list the name of their program.

▪

INVENTORY FOR HEALTH ASSESSMENT

The RWJF Health Factors include:

1. Alcohol and Drug Use
2. Diet and Exercise
3. Sexual Activity
4. Access to Care
5. Quality of Care
6. Social and Economic Factors
7. Education
8. Employment
9. Family and Social support
10. Income
11. Air and Water Quality
12. Housing and Transit

INVENTORY FOR HEALTH ASSESSMENT

The Assessment Tool Has Two Parts.

- In Part 1 you select which of the 12 Health Factors you are working on.
- In Part 2 these sections are then forwarded to you to skim for titles that align with your program. If the description matches your program, you select the policy or program, and on the line provided add the name of your program.
